

## WIFI CONNECTION FOR ATTENDEES TO AELCO-12

The University of La Rioja has enabled a special network for the conference called UR\_AELCO.

To connect to it you do not need a password.

When you connect, you have to open a web browser and navigate to any address. The browser will automatically be redirected to the login screen as shown in the image on the left.

On this screen you have to enter a mobile phone number and press Acceder ("Access").

An SMS will be sent to the phone number you have provided with a code.

Another screen will automatically appear. You have to enter the code in the box "Código recibido por SMS" ("code received by SMS").

Once the code has been entered, the device will have internet access.

This operation only needs to be performed once. The device is validated for the entire calendar week, so the process does not have to be repeated.

It is important that the devices are configured to take IP via DHCP\*.

If they have a manual IP configured, they will not be able to connect to the Wi-Fi network.

(\*) The Dynamic Host Configuration Protocol is a network management protocol used on Internet Protocol networks for automatically assigning IP addresses and other communication parameters to devices connected to the network using a client-server architecture.
